

# SR & Intelligent Digital (CAN-open) sensors and accessories for use with HPM Series meters and in generic CAN bus environments

Up to

- 750 lpm, 200 US gpm flow measurement
- 1000 bar, 14500 psi pressure measurement

## Wide range of cables and accessories

All Intelligent Digital (ID) sensors use the CAN-open protocol that makes a plug-and-play system with the HPM meters. These sensors are compliant with the CAN-open standard and are fully supported for integration in third party systems. The SR sensors are also plug-and-play, are compatible with the current range of HPM meters and backwards compatible with previous meters.

There is a wide range of cables and connectors to suit all applications. The ID sensors are connected in-line with one another, by way of a Y cable, often resulting in shorter cable lengths.

The CT and CTR series of turbine flow meters, provide a complete solution to the flow and temperature measurement of hydraulic systems on test stands, machine tools and other fixed or mobile applications. The flow meter can be installed anywhere in the hydraulic circuit for production testing, commissioning, development testing and control systems. The compact design allows the flow meters to be installed where space is limited.

The integral loading valve built into the CTR series provides smooth progressive pressure control in both flow directions allowing components such as cylinders or motors to be tested without re-plumbing the test connections.

The pressure sensors are available in six different ranges up to 1000 bar and all measure temperature as well. The whole unit is housed in a stainless steel body, sealed to IP67.

## Features

### Flowmeters

- **FLOW:** – 1 -750 lpm  
0.25 - 200 US gpm
- **PRESSURE:** Upto  
480 bar, 7000 psi
- **PORTING:** BSPP or SAE  
BI directional operation

### Flowmeters with Loading Valve

- **FLOW:** – 1 -750 lpm  
0.25 - 200 US gpm
- **PRESSURE:** Upto  
480 bar, 7000 psi
- **PORTING:** BSPP or SAE
- **BI DIRECTIONAL**  
operation ‘INTERPASS™’  
safety system, bypasses  
oil internally in the event  
of valve being over  
pressurised
- **FLOWMETER  
TEMPERATURE:**  
-25 to 125°C (-13 to 257 °F)

### Pressure transducers

- **PRESSURE:** -1 to 1000 bar  
(-14.5 to 14500 psi)
- **TEMPERATURE:** -25 to  
105 °C (-13 - 221 °F)

### Accessories

- **CABLES:** 0.5 to 20 meter  
long

## CAN-open Functionality

All the CAN sensors listed above are CAN-open compliant and can be used by integrators in CAN bus applications. The sensors digitise the physical quantity and make the value available on the CAN bus. They can sample at various rates, apply filtering and scale the measurements appropriately.

The sensors implement the CAN2.0B standard and can transmit at rates up to 1Mbits/s with 11 or 29 bit identifiers. The physical layer of the 2-wire interface is specified according to ISO 11898. The bus termination resistor is not included in the device.

The CAN protocol complies with the CAN-open specification DS301 and CAN-open device profile DS404. Possible configurations can be set with the object dictionary. Heartbeat and emergency messages can be used to monitor the status of the sensor.

### CAN specification

#### Supply

**Voltage:** 8-40VDC, protected against reverse polarity.  
**Current :** Pressure, temperature <10mA  
 Flow 25mA.

#### CAN Interface

**Physical layer:** 2-wire interface, 5 V level according to ISO 11898, protected against short-circuit  
**max. Bitrate:** 1 Mbit/sec  
**Bus termination:** external (120Ω) at last node  
**Protocol:** CAN-open DS301, Device Profile DS404

### Connections

	Assignment
1	CAN shield, PE
2	+ UB, +24 VDC
3	GND, 0V
4	CAN_H, CAN+
5	CAN_L, CAN-

## CAN-open Summary

The measured data can be extracted from the sensor in one of two formats: process value or field value.

Process value is a 32bit floating point number (little endian) to IEEE-754-Format. It is formatted and scaled in the appropriate sensor units, ie. bar, lpm, usgpm, etc.

Field value is a 16bit integer (±32000) representing the linear gradient of the sensor value. This must be converted to a process value based on the sensor type and range by the user. It has the advantage of producing less bus traffic but must be configured at every power up.

**CAN-open type:** NMT Slave  
**Network bootup:** minimum bootup  
**COB-ID placing:** pre-defined connection set, SDO  
**Node id:** object (specific entry)  
**Bitrate:** object (specific entry)  
**Number of PDOs:** PDO1, PDO5, PDO6 & PDO7  
**Emergency message:** supported

**Heartbeat:** supported  
**Device profile:** CiA DS404  
**Default settings:** Bitrate 500 kbit/s  
 NodeID 78 hex (may vary)  
 Process value automatically transmits at the set rate after power on.

Full data sheets are available on request from Webtec sales.

Electronic Data Sheets (EDS) created with the CAN-open Design Tool v2.2.42.0. are also available.
