General information series 2000

Calibration

As standard the Series 2000 is always equipped with a display and 3 pushbuttons for easy calibration. Both the measured and the calibrated value can be read locally. A full calibration can be completed using the three push-buttons or with the optional handheld terminal (HART®), or with special software from Klay Instruments.

Zero and span can be calibrated very easy, without testpressure, also in vacuum ranges. Linearisation can be made for various tankshapes like horizontal and conical tanks (P111). For all other adjustable points see table right.

The series 2000 will as standard be delivered with 2 closed covers, so the 3 pushbuttons and the standard display are behind the cover.

A cover with transparent plastic can be delivered as an option (I). In that case you can use the display as a local indicator.

Temperature Compensation

All our transmitters are fully temperature compensated. All Klay transmitters with flush diaphragm are equipped with the unique KLAY **Flush Diaphragm Technology**. (Detailed documentation available).

For **High Temperature Applications** where the process temperature is continuously above 100°C we manufacture special transmitters with cooling fins to reduce the temperature (Series 2000-SAN with HT option). With a compact 2000-SAN transmitter with option HT we can go up to 200°C and with seperation by a cable between process connection and electronics housing (Type: 2000-SAN-Cable-HT) we can go up to 350°C continuously!

The HT option is only available on series 2000-SAN (except range 1 and 2)

* Transparent cover (I) with option Ex: Min. amb. temp. -10°C
