

FOT-600

OPTICAL LOSS TEST SET

The FOT-600 optical loss test set (OLTS) offers various configurations and wavelength choices, ideal for link qualification; it has a memory capacity of 1000 data items and enables data transfer to a PC via USB connection.

KEY FEATURES

Combines a power meter and a light source and comes with your choice of wavelengths

Memory capacity of 1000 data items; enables data transfer to a PC via USB connection

Ideal for network-link qualification: pass/fail LED indicator and thresholds

Error-free testing: automatic wavelength switching, and no offset nulling required

Visual fault locator (VFL) option for quick and easy troubleshooting (standard)

Low cost of ownership: three-year warranty and recommended calibration interval

Complete reporting software

IDEAL FOR NETWORK-LINK QUALIFICATION

Part of EXFO's 600 handheld series, which includes the FPM-600 power meter and the FLS-600 light source, the FOT-600 OLTS is the ideal tool for network-link qualification. Designed for first-class ease of use, the FOT-600 features a pass/fail LED indicator; what's more, it lets you set your own thresholds for absolute or relative loss measurements.

Thanks to its memory capacity of 1000 data items and its built-in reporting software, the FOT-600 facilitates data management and enables data transfer to a PC via USB connection. Create and customize a complete test report, including certification of the link with pass/fail information.

ERROR-FREE TEST FEATURES IN A HIGHLY VERSATILE UNIT

When using the FOT-600 in Auto-Switching mode, the light source automatically toggles between available wavelengths. The power meter recognizes the wavelength in use and switches to the proper calibration parameter. With a press of a button, you can store results for all wavelengths at once, providing easy and error-free testing.

Thanks to its unique design, the FOT-600 OLTS reduces risk of error and measurement time in typical measurement situations, as the need for an offset nulling is eliminated.

In addition to network-link qualification features, the highly accurate FOT-600 offers over 40 calibrated wavelengths, including all CWDM wavelengths. What's more, it lets you measure power fluctuations with its Hold Min/Max Power function.

FTTx-READY

EXFO's FOT-600 allows for the testing of passive optical networks (PONs) at 1310 nm, 1490 nm and 1550 nm, the three wavelengths recommended by the ITU-T (G.983.3) for PONs.

RUGGED AND VERSATILE

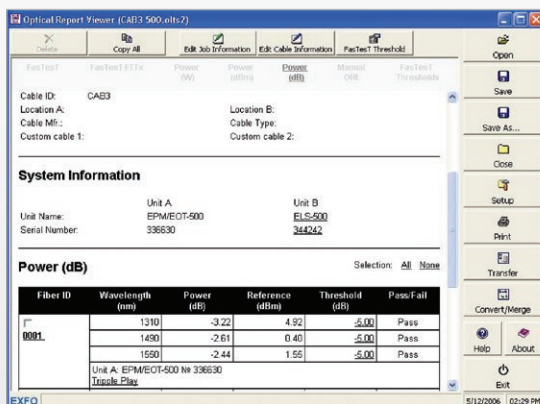

Like all EXFO portable instruments, the FOT-600 is built for top ruggedness and versatility, perfect for the harshest test conditions. It features a keypad/LCD backlight, for easy operation in darker environments. What's more, it is powered by a rechargeable battery.

REPORTING SOFTWARE

This new software tool enables you to produce professional-looking reports with comprehensive documentation. It also offers these functionalities:

- Two test files can be merged into one test report (see note 3)
- Pass/fail thresholds that are active during download are automatically activated and displayed in the Report Viewer
- One-touch storage of results for all wavelengths at once (see note 1)
- Unit B configuration information can be input and documented (see note 2)
- Data transfer can be launched from the Report Viewer window (see note 3)
- A pass/fail threshold can be set for an individual fiber or wavelength (see note 4)

Spectral width (nm) ^g	≤5
Output power (dBm)	≥1
Power stability (dB) ^h	15 min ±0.03 8 h ±0.1
Tone generation	270 Hz, 1 kHz, 2 kHz
Automatic wavelength recognition	Yes
Battery life (hours) (typical in Auto mode)	50
Warranty and recommended calibration period	3 years

a. Guaranteed unless otherwise specified. All specifications valid at 23 °C ± 1 °C, with an FC connector and at 1550 nm for detector.

b. In CW mode; sensitivity defined as 6 x rms noise level.

c. For calibration wavelengths. Valid up to 20 dBm for FOT-602X.

d. For power > -25 dBm for FOT-602X.

e. At 850 nm, 1300 nm, 1310 nm, 1490 nm, 1550 nm and 1625 nm; for power > -40 dBm (typical) for FOT-602X.

f. For a variation of ≤ 0.06 dB at power levels ≥ -25 dBm for FOT-602X.

g. rms for FP lasers.

h. After a 15-minute warm-up period, and using an APC connector on the power meter (except for multimode sources, for which a PC connector is used). Expressed as ± half the difference between the maximum and minimum values measured during the period.
