The intelligent actuator

## Technical data sheet

Type AD-001 + AD/AS-002

Type AD/AS-004 to -230

Type AD/AS-360 to -1200

## Objective

---

actubar is the latest generation in our range of pneumatic actuators. Externally unmistakable and technically unique, the actubar offers new advantages and uses.

Technically speaking, actubar is the main component in the valve control system bar-vacontrol, a modular, intelligent system for monitoring and regulating automatic valves.

Working together with our directly-mountable system components bar-positurn2 or bar-posiswitch, actubar regulates quarter-turn valves economically and effectively.

## Benefits / Applications

---

- the unique construction of the actubar enables the addition of components acc. to VDI/VDE 3847 without hose connections or conduit.
- positioner and limit switch boxes with solenoid valves can be mounted directly, without conduit installation and constitute a compact unit in combination with actubar-actuators
- the standard interface (VDI / VDE 3845) allows mounting of all commercially available signal units
- end position can be adjusted at 0° and 90° from +5° to -10°
- reduced warehousing by using equal end-caps for single as well as double-acting actuators
- simple insertion and removal of safety springs
- flexible automation of valves through various ISO flange interfaces per actuator size
- optional coatings and materials enable usage even in aggressive environments
- long service life via plain-bearing system which reaches all moving parts
- octagonal pinion-connection enables actubar to fit universally onto valves with parallel or diagonally operating shafts
- blowout-secure pinion minimizes the danger of accidents
- wide spectrum of application through supply of different pivoting angle possibilities
- elevated failsafe performance by our SIL 3 certified actuators.

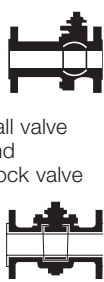

## Technical data

	Standard model	Options available
Description	pneumatic double piston actuator type AD = double-acting type AS = single-acting (with spring return)	
Constructional features	rack and pinion principle with self-centering piston guides in the casing; single-acting: with bar safety springs	
Mounting position	any orientation	
Standards	interface actuator signal unit: acc. to VDI/VDE 3845 (NAMUR) and VDI/VDE 3847 interface actuator/control valve: acc. to NAMUR i.e. VDI/VDE 3845 interface actuator/valve: 4, i.e. 8 internal threaded in actuator casing acc. to EN ISO 5211	differing mounting and connecting dimensions possible  pinion optional with internal double-D or acc. to DIN ISO 5211
Materials	casing: aluminium alloy, anodized caps: aluminium alloy pistons/racks: aluminium alloy pinion: corrosion-protected steel seals: NBR bearings: self-lubricating plastic screws: stainless steel A2	Casing: anodized, powder-coated, PTFE Caps: PTFE  Pinion: stainless steel AISI 303; AISI 316 Seals: FKM
Ambient temperature	-20°C to +80°C	low-temperature model: -40° C to +80° C high-temperature model: 20° C to +160° C
Rated pivoting angle	double and single-acting: 90° rated pivoting angle as standard from +5° to -10° adjustable in both end positions	
Torque	2.5 Nm to 9,600 Nm	
Control pressure	2 to 8 bar	
Control medium / Quality	filtered air in respect of remaining oil content, dust and water minimum according to DIN ISO 8573-1:2010 [7: - :4]	also upon request: other non-aggressive gaseous or liquid mediums
Certificates	SIL 3 by TÜV Rheinland, test basis IEC61508 Parts 1-2 and 4-7:2010	

## Mounting variations

## Function – double-acting

When pressure is applied to both of the external chambers through input connection „4“, then the pistons move together into the basic position (0°). The force from both pistons is transferred onto the pinion „C“ via the toothed rack. If input connection „2“ is given pressure and „4“ as exhaust, then the pistons move apart into the 90° position.

In both positions, the pivoting angle can be set via the adjusting screws „D“ to a position of + 5° and - 10° in a depressurised condition. When the correct angle is reached, then fix with locking nut „E“.

## Function – single-acting

In the single-acting model the springs push the pistons back into the basic position and air is exhausted from connection „2“.

The number of springs can be selected to correspond to the applied pressure.

Adjustment of the end positions is described in „Function double-acting“.
