

Specifications ITR 1705020

Safety isolating transformer

interSAFETY transformers can be used in every SELV or PELV circuits. In all applications where reliable low voltage supply is needed. They are often used at automation and processing industry.

interSAFETY transformers can be ordered fully customized by your requirements. All transformers are equipped with insulation between primary and secondary coil. Transformers can also be ordered with primary and/or secondary circuit protectors.

Intertrafo Oy manufactures all wounded components in accordance with the IEC-standards. Other standards on customers request.

<i>Primary</i>	230Vac
<i>Secondary</i>	24Vac
<i>Rating</i>	100 VA
<i>Frequency</i>	47 - 63Hz
<i>Protection degree</i>	IP00
<i>Thermal Class</i>	B (130°C)
<i>Ambient temperature</i>	40°C
<i>Terminals</i>	Terminal block, 4mm ²
<i>Dimensions, weight</i>	84 x 85 x 99mm, 1,80 kg
<i>Standards</i>	EN61558 - 2 - 6
