

## CC-3000 Shaft Adapters

### Summary

Convertech's CC-3000 is an inexpensive way to adapt a standard air shaft to hold a larger diameter core. These chuck adapters are made with high quality construction and heavy-duty materials. This gives the chuck adapters superior performance in rewind and unwind applications. They are best suited for operations using rolls with metal, fiber, or cardboard cores.

### Features

The CC-3000 features a lightweight design and are available with core stops and split clamps to protect the shaft they are mounted on. These chuck adapters have an internal bladder prevents them from over expanding or swelling over time and protects them from cuts and wear and tear. We also have connector kits available to string multiple CC-3000 chuck adapters together. And they are perfectly matched when used with a Convertech Through Style Shaft.

### Customization

The CC-3000 is designed to fit your specifications. When placing an order for one of our chuck adapters, we ask that you specify the diameter you need a quote for so that we can make sure your CC-3000 fits your needs and specifications.

As with all of our shafts and chuck adapters, we guarantee that your CC-3000 will be designed and manufactured to the same tolerances as all of our industry's leading shaft adapters.

### **Availability**

Here at Convertech, we are always working hard to make sure that we deliver quality. Please [contact us](#) for a more specific lead time, to request a quote or if you have any other questions.

## **Specifications**

- Lightweight design
- Available with split clamps to protect the shaft that they are mounted on
- Connector kits available to string multiple CC-3000 together
- 3", 4", 5", 6", 8", 10", 12" and 16" diameters
