## Mounting

### Sensor Orientation

In the default setting the zero position of the sensor is reached, when the electrical connection faces straight upwards.

### X Orientation

### Mounting of the sensor

Sensors from the -F99 series consist of a sensor module and accompanying cast aluminum housing. Select a vertical surface with minimum dimensions of 70 mm x 50 mm to mount the sensor.

Mount the sensor as follows:

1. Loosen the central screw under the sensor connection.
  2. Slide back the clamping element until you are able to remove the sensor module from the housing.
  3. Remove the sensor module from the housing
  4. Position the housing at the required mounting location and secure using four countersunk screws. Make sure that the heads of the screws do not protrude.
  5. Place the sensor module in the housing.
  6. Slide the clamping element flush into the housing. Check that the sensor element is seated correctly.
  7. Finally tighten the central screw.
- The sensor is now mounted correctly.

## Configuration

### Node ID setting

Inclination sensors by Pepperl+Fuchs are supplied with node ID 1. To change the node ID, write the new node ID to object 2000h "Node ID." If a "Reset sensor" command is issued via an NMT message or the power supply is interrupted, the sensor operates with the new node ID. Node ID values between 1 and 127 can be sent in hexadecimal format (01h ... 7Fh). Invalid values are not adopted. In this case, the current setting is retained.

**Example of modifying node ID from 1 to 15:**

601h	2Fh	00h	20h	00h	0Fh	xxh	xxh	xxh
CAN -ID	Com man d	Object index		Subi ndex	New ID	not used		
	Data byte 1	Data byte 2	Data byte 3	Data byte 4	Data byte 5	Data byte 6	Data byte 7	Data byte 8

**CAN ID: 601h**, SDO1 channel of node 1

**Command: 2Fh**, write object, 1 byte of usable data

**Object index: 2000h**, note: low byte first, then high byte!

**Subindex: 00h**

**New ID: 0Fh**, only values between 01h ... 7Fh (1 ... 127) permitted

### Baud rate setting

Inclination sensors by Pepperl+Fuchs are supplied with a baud rate of 250 kbit/s. To change the baud rate, write the new baud rate to object 2001h "Baud rate." If a "Reset sensor" command is issued via an NMT message or the power supply is interrupted, the sensor operates at the new baud rate. The inclination sensor supports the baud rates 125 kbit/s, 250 kbit/s, 500 kbit/s and 1 Mbit/s. Invalid values are not adopted. In this case, the current setting is retained.

#### Example of modifying the baud rate from 250 kbit/s to 1 Mbit/s:

601h	2Fh	01h	20h	00h	08h	xxh	xxh	xxh
CAN-ID	Command	Object index		Subindex	New baud rate	not used		
	Data byte 1	Data byte 2	Data byte 3	Data byte 4	Data byte 5	Data byte 6	Data byte 7	Data byte 8

**CAN ID: 601h**, SDO1 channel of node 1

**Command: 2Fh**, write object, 1 byte of usable data

**Object index: 2001h**, note: low byte first, then high byte!

**Subindex: 00h**

**New baud rate: 08h**, for 1 Mbit/s

**New baud rate: 04h**, for 500 kbit/s

**New baud rate: 02h**, for 250 kbit/s

**New baud rate: 01h**, for 125 kbit/s

## Indication

### LED displays

The inclination sensor has three indicator LEDs that allow rapid visual monitoring.

- The green **power** LED indicates the state of the power supply
- The yellow **run** LED indicates the bus and sensor status
- The red **err** LED indicates an error

power (green)	run (yellow)	err (red)	Meaning
Off	Off	Off	No power supply
On	Flashing constantly	Off	Pre-operational
On	1x flashing	Off	Stopped
On	On	Off	Operational
On	Off	On	CAN bus off
On	depending on bus status	1x flashing	Warning, e.g., outside measuring range
On	depending on bus status	2x flashing	Error, e.g., EEPROM checksum incorrect
Flashing constantly	Off	On	Undervoltage
