Warning

These products are intended for use in industrial compressed air systems only. Do not use these products where pressures and temperatures can exceed those listed under 'Technical Data'.

Before using these products with fluids other than those specified, for non-industrial applications, life-support systems, or other applications not within published specifications, consult NORGREN. Through misuse, age, or malfunction, components used in fluid power systems can fail in various modes.

The system designer is warned to consider the failure modes of all component parts used in fluid power systems and to provide adequate safeguards to prevent personal injury or damage to equipment in the event of such failure.

System designers must provide a warning to end users in the system instructional manual if protection against a failure mode cannot be adequately provided.

System designers and end users are cautioned to review specific warnings found in instruction sheets packed and shipped with these products.

 Spark quenching with diode with DC and inductive load:
 I_{max} = 1,5 x I_{max} of table
 I_{min} = 1 (mA)
 Creepage and air paths correspond to insulation group B according to VDE Reg. 0110 (except contact clearance of microswitch).

*3) Gold-plating not required as it would decay.
 Max. perm. in-rush current (appr. 30 ms) | AC = max. 15 A
 *4) Gold-plating required (will not decay).
 *6) Lower value of critical voltage guarantees sufficient contact safety.
 Lower voltages permissible under favourable conditions.

Spark quenching with DC voltage

1. Diode D in parallel to inductive load.
 Observance of correct polarity (positive pole to cathode).

Dimensioning specifications for quenching diode:
 Rated voltage at diode: $U_D \geq 1,4 \times U_s$

Rated current at diode: $I_N \geq I_{Last}$

Selection of a quick switching diode (recovery time $t_{rr} \leq 200$ [ms]).

2. RC link in parallel to load in parallel to switching contact.
 Suited for DC and AC voltage.

Dimensioning principles:
 R in $\Omega \approx 0,2 \times R_{Load}$ in Ω
 C in $[\mu F] \approx I_{Load}$ in [A]
