

PR 6201 (500 kg... 50 t) Precision Compression Load Cell

500 kg... 50 t Type LA | L | D1 | C3

- Easy to install
- Well-proven rockerpin design
- Easy corner adjustment by matched load cell output
- Full stainless steel housing
- Wide temperature range
- High overload capacity
- Resistant against vibrations
- Hermetically sealed, IP68 (depth of 1.5 m for 10,000 hrs.), IP69K
- 4 to 20 mA output signal as option (LA version)
- Optimum overvoltage protection
- Ex-version available (PR 6201/..E)
- W&M approval (OIML R60, NTEP)

Product Profile

The PR 6201 range of load cells is specially designed for weighing silos, tanks and process vessels.

The unique design principle, in combination with the FlexLock installation kits, makes it possible to balance out movements arising from mechanical or thermal expansion or contraction of the vessel or its supporting construction.

A particular design characteristic is that the overall height and shape of the load cell remain unchanged, from 500 kg up to 50 t. Alongside this, the unit has an especially high overload capacity of up to 200%.

At the same time, this range distinguishes itself – in addition to its high measurement accuracy and repeatability – above all for its unmatched reliability, robustness and stability, which offer trouble-free operation without adjustment, year after year.

The pendulum support principle, combined with patented measuring element geometry, ensures that force transmission into the sensor is always at the optimum level and, in this way, the effect on measurement accuracy is minimized. At the same time, the load cell offers a particularly high overload range, high repeatability and perfect linearity.

There is an especially wide working temperature range attributable to sophisticated resistance strain gauge technology. The hermetically sealed enclosure and special TPE cable allow the unit to be used even under extreme operating conditions in harsh production environments.

The entire measurement chain can be calibrated without the use of reference weights. Due to "matched output" technology, a damaged load cell can be exchanged without the need for re-calibration. This saves a tremendous amount of time during commissioning.

An explosion-proof (Ex) version of this range of load cells is also available, as an option, for use in intrinsically safe environments.

Restoring force

For each mm of movement that the top of the load cell shifts from the vertical axis, a horizontal restoring force is generated of:
 max. capacity ≤ 10 t: 0.65 %
 max. capacity ≥ 20 t: 1.55 %
 of the vertical load on the load cell

Load cell housing

Full stainless steel housing, membrane and measuring element hermetically sealed, welded, filled with inert gas.
 Material-No.1.4301 (DIN 17440), equivalent to 304 S11/S15 (B.S.)

Ingress Protection

IP68, IEC529 (equivalent to NEMA 6). The load cell can be submerged in water to a depth of 1.5 m for 10,000 hours, IP69k

Cable

Robust, flexible, screened
 Sheath: TPE Thermopl. Elastomere, grey (for PR 6201/..E: blue)
 Diameter: 5 mm, wires 4×0.35 mm²
 Length: 5 m (500 kg - 10 t), 12 m (20 t - 50 t)

Bending radius

Fixed installation: ≥ 50 mm
 Flexible installation: ≥ 150 mm

Certificate of conformity

Valid for: PR 6201/..E
 Feature:
 II 1 G EEx ia IIC T6, II 1D IP65 T 85 °C
 Registration number:
 PTB 02 ATEX 2059, TÜV 03 ATEX 2301X

Technical Data		LA	L	D1 N	C3
