

NFE 44121 - DIN 24 256 - ISO 2858 - ISO 5199

Generalities

The horizontal, single stage centrifugal pumps of NI range are intended for the pumping of liquids that required Stainless Steel construction in the most various industrial applications.

NI pumps range offer flow rates up to 300 m³/h (1320 US gpm) and a discharge head up to 100 mcl (327,50 ft).

Normalized

The dimensions and characteristics of NI pumps correspond to standards NFE 44121 - DIN 24256 - ISO 2858 and 5199.

Suction and discharge flanges correspond to standards NFE 29-203 – DIN 2533 – ISO PN 16

Sealings

NI pumps can be mounted with normalised mechanical seals, single or double depending on liquid pumped. For application with magnetic drive, refer to brochure NI-M.

ATEX Conformity

For the EC zone, NI pumps are available certified as per ATEX 94/9/CE.

II 2/3 GcT4 (others on demand).

Voluntary certification INERIS 06 ATEX 3005X.

Construction

All parts in contact with pumped liquid are made of Stainless Steel.

- X2 Cr Ni Mo 17-12-2 (AISI 316L).
