Pilot Operated Directional Valve

DG3V-7-30 Design

Solenoid Controlled Pilot Operated Directional Valve

DG5V-7-50 Design

General description

DG*V-7 valves are used primarily for controlling the starting, stopping and direction of fluid flow.

Two series of valves, DG5V solenoid controlled, pilot operated and DG3V pilot operated models are available with a wide selection of spools. These include meter-in and meter-out spools and a regeneration type that can obviate extra valves essential in traditional circuit arrangements.

All spools have been designed to provide good low shock, fast response characteristics which can be enhanced by optional stroke and/or pilot choke adjustments.

Models include spring offset, spring centered and detented versions.

Features and Benefits

- High pressure and flow capability for maximum cost-effectiveness.
- Low headloss to minimize power wastage.
- Low shock characteristics to maximize machine life.
- Facility to change solenoid coils without disturbing the hydraulic envelope.
- The many optional features, particularly for DG5V valves, permit matching to virtually every application within the valve's power capacity.
- **Optional mainstage spool position monitoring switch (CE marked)**

Model Code

DG3V-7 30 Series, Pilot Operated Directional Valves

For pilot operated valves:

For solenoid controlled, pilot operated valves:

1 Fluid Compatibility

Blank – Standard BUNA-Nitrile Seals

F3 – Viton Seals

Note: For further information see “Hydraulic Fluids” section on page 13.

2 Spool type

See “Functional Symbols” section on pages 5-6.

3 Spool spring arrangement

A – Spring offset, end-to-end (P to B when operated)

AL – As “A” but left-hand build (P to A when operated)

B – Spring offset, end-to-center (P to B when operated) ■

BL – As “B” but left-hand build (P to A when operated) ■

C – Spring centered

N – Two-position detented

■ DG5V option. Same function from DG3V-7-*C valves by alternating pilot supply to one port (X or Y) and permanently draining the other.

4 Spool Control

Omit if not required

1 – Stroke adjustment at both ends ▲■

2 – Pilot choke adjustment both ends

3 – “1” and “2” combined ▲■

7 – Stroke adjustment, port A end only ▼

8 – Stroke adjustment, port B end only ▼

27 – “2” and “7” combined ▼

28 – “2” and “8” combined
Omit if not required

▲ Not applicable to DG5V-7-*B(L) models.

▼ Not applicable to models shown in the “Spring offset, end-to-center, opposite hand” section on page 6

◆ Not applicable to models shown in the “Spring offset, end-to-center” section on page 6

■ Not applicable for spool “8” models

5 Main Stage Spool Monitoring Switch

Blank – None

PCA – Center sensing switch on “A” port end

PCB – Center sensing switch on “B” port end

PDA – Double offset sensing switch on “A” port end

PDB – Double offset sensing switch on “B” port end

PCD – Center sensing switch on “A” port end and double offset sensing switch on “B” port end

PPA – Offset sensing proximity switch “A” port end

PPB – Offset sensing proximity switch “B” port end

PPD – Offset sensing proximity switch both ends ■

* The spool position monitoring switch shown on this technical document is CE marked and certified and complies to European Standard EN 61000-6-4: 2001 (Emissions) for Class A and European Standard EN 61000-6-2: 2001 (Immunity).

■ Not applicable for spool “8” models

6 External Pilot Supply, DG5V Valve Option

Omit for internal pilot supply

E – Valve configured for external pilot supply to port X

7 Internal Pilot Drain, DG5V Valve Option

Omit for external drain, which is also mandatory for 1, 8 and 9 spool-type valves

T – Valve configured for internal pilot valve drain.

8 Minimum Pilot Pressure Generator (P Port Option)

Blank – None

K - 0.35 bar cracking pressure

9 Manual Override Option

Blank – Plain override in solenoid end(s) only ▲

H – Water-resistant manual override on solenoid end(s) ▲

W – Twist & lock override in solenoid ends •

Z – No override at either end
▲ No override in non-solenoid end of single-solenoid valves.
• DC only

10 Solenoid Energization Identity

V – Solenoid “A” is at port A end of pilot valve and/or solenoid “B” at port B end independent of main-stage valve port locations or spool type; German practice.

Omit (except as noted below) for US ANSI B93.9 standard

whereby solenoid “A” is that which, when energized, connects P to A in main-stage valve, and/or solenoid “B” connects P to B.

Note: Energization identities on valves with type 8 spools are identical under US and German practices. In such cases the “V” code is used.

11 Solenoid Type Connection(s)

U – ISO4400, DIN43650 connector

U1 – ISO4400 fitted with PG11 plug

U6 – ISO4400 with fitted DIN plug with lights

KU – Top exit flying lead (150mm)

KUP4 – Junior timer (Amp) connector

KUP5 – Integral Deutsch connector

FW – Flying lead with 1/2” NPT thread wiring housing

FTW – Fly. lead wired terminal block & 1/2” NPT thread wiring housing

FPA3W – Fly. lead, 3 Pin connector & 1/2” NPT thread wiring housing

FPA5W – Fly. lead, 5 pin connector & 1/2” NPT thread wiring housing

Model Code (Cont...)

12 Indicator Lights

Blank – None

- L** – Solenoid indicator lights•
- Flying lead coil type only

13 Surge Suppressor/damper

- D1** – Diode positive bias
- D2** – Negative bias
- D7** – Transorb type

14 Coil Rating

See Page 7 for circuit details

B – 110V AC 50Hz/120V AC
60 Hz

BL – 110V 50 Hz/120V 60 Hz

D – 220V AC 50 Hz/240V
AC 60 Hz

DS – 28V DC 30 watt

G – 12V DC

GL – 12V DC

H – 24V DC

HL – 24V DC

HM – 24V DC 8 watt

15 Tank Port Rating

6 – 210 bar (3000 psi) for AC performance.

7 – 210 bar (3000 psi) for DC performance.

16 Design Number

20 series for DG3V valves.

30 series for DG5V valves.

Subject to change.

Application Notes

Pilot Pressure

- Pilot pressure must always exceed tank line pressure by at least the requisite minimum pilot pressure. This also applies when combining open center spools (0, 1, 8, 9 and 11) with internal pilot pressure, but they should be used only with externally drained valves.
- Internally drained valves may be used only when surges in the tank line cannot possibly overcome the minimum pilot pressure differential referred to above. When the possibility of pressure surges in the tank line exist, externally drained valves are recommended.
- When DG5V-7-*N valves are de-energized the pilot and main spools remain

in the last selected position, provided that pilot pressure is maintained. If pilot pressure fails, or falls below the minimum, the main spool will spring center.

Caution: Because of this in-built feature the flow conditions of the center position must be selected with care, for the effect on both the direction of flow and the pilot pressure.

Stroke Adjustment Options

These control the maximum opening of the main spool/body passages by adjusting the limits of spool stroke. By this means, the response time and the pressure drop across the valve for any particular flow rate can be controlled. Stroke adjusters can be fitted at either or both ends of the main-stage valve for adjusting the stroke in

one or both directions. One use of stroke adjusters is for controlling the metering characteristics of "X*" or "Y*" - type spools. (See model code #4.)

Pilot Choke Adjustment Options

These provide a meter-out flow control system to the fluid in the pilot chambers of main-stage valves. It allows the velocity of the mainstage spool to be controlled, thereby reducing transient shock condition. For optimum results, a constant reduced pilot pressure is recommended.

Control Data, General

- Dependent on the application and the system filtration, any sliding spool valve, if held shifted under

pressure for long periods of time, may stick and not move readily due to fluid residue formation. It may therefore need to be cycled periodically to prevent this from happening.

- Surges of fluid in a common drain line serving two or more valves can be of sufficient magnitude to cause inadvertent shifting of the spools. It is recommended that circuit protection be used, such as separate drain lines.
- Control by stroke adjusters, pilot chokes and minimum-pilot-pressure generator options is described on this page.

Functional Symbols

Spool Types

Shown in 3-position form, plus 2 transients.

Notes:

1. In the detailed and simplified symbols on this and the previous pages, the transient positions are omitted for simplicity.

2. In certain 2-position valves, the "o" position becomes an additional transient, i.e. in DG5V-7-*A(L) and DG5V-7-*N valves.

Your Eaton representative can provide further details.

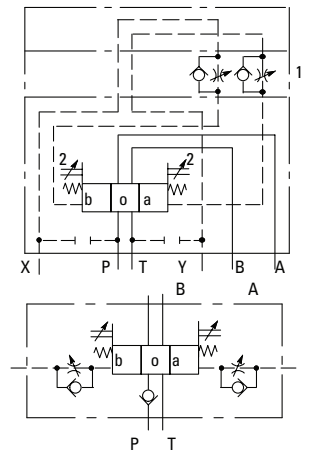

■ Only 35A available

DG3V-7 Options

The following are shown in a DG3V-7-*C example:

1. Pilot choke module
2. Stroke adjusters at either or at both ends (shown at both ends in example)

One or more options can be built into any DG3 series valve.

DG3V-7 Pilot Operated Models

Comprehensive and simplified symbols.

Spring Offset, End-to-End, DG3V-7-*A

Comprehensive and simplified symbols shown configured for external pilot supply and internal drain

Spring Offset, End-to-End, DG5V-7*A

Spring Offset, End-to-End, Opposite Hand, DG5V-7*AL

Spring Centered, DG5V-7*C

Spring Offset, End-to-Center, DG5V-7*B

Spring Offset, End-to-Center, Opposite Hand, DG5V-7*BL

Detented, DG5V-7*N

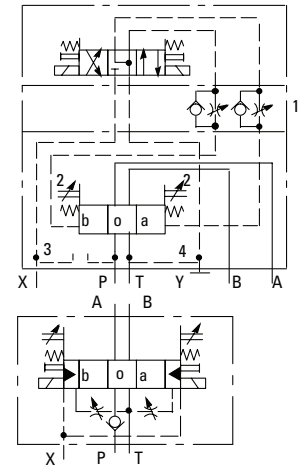

DG5V-7 Options

The following are shown in a DG5V-7*C example:

1. Pilot choke module
2. Stroke adjusters, at either or at both ends (shown at both ends in example)
3. External pilot connection
4. Internal drain

One or more options can be built into any DG5 series valve.

SOLENOID IDENTIFICATION

Model (see also in "Model Code" on page 8)	Spool types	Solenoid identity at: Main port "A" end	Solenoid identity at: Main port "B" end
DG5V-7*A/B(-**)(-E)(-T)(-*)-M	All except "8"	-	B
DG5V-7*A/B(-**)(-E)(-T)(-*)-VM	All except "8"	-	A
	"8" only	B	-
DG5V-7*AL/BL(**)(-E)(-T)(-*)-M	All except "8"	A	-
DG5V-7*AL/BL(**)(-E)(-T)(-*)-VM	All except "8"	B	-
	"8" only	-	A
DG5V-7*C/N(-**)(-E)(-T)(-*)-M	All except "8"	A	B
DG5V-7*C/N(-**)(-E)(-T)(-*)-VM	All spools	B	A

Operating Data

MAXIMUM PRESSURES:

DG3V-7 valves; ports:

P, A, B, X and Y	350 bar (5000 psi)
T	250 bar (3626 psi)

DG5V-7-**(L)(-*)(-E)(-*) valves, (externally drained); ports:

P, A, B, T and X	350 bar (5000 psi) ▲
Y	210 bar (3045 psi) ▲

DG5V-7-**(L)(-*)(-E)-T(-*) valves, (internally drained); ports:

P, A, B and X	350 bar (5000 psi) ▲
T	210 bar (3045 psi) ▲

Pilot pressures

See "Pilot Pressures" on page 9

▲ The DG5V, 50 design two-stage valves have been designed to satisfy the needs of most applications.

Consult your Eaton representative about an alternative model if:

- a) Valves are required to remain pressurized for long periods without frequent switching, and /or
- b) Back pressure on the drain port of externally drained models (or the tank port of internally drained models) is required to rise above 210 bar (3000 psi).

MAXIMUM FLOW RATES, L/MIN (USGPM) AT THE MINIMUM PILOT PRESSURES ■, AND WITH SPOOL TYPE:

See Pilot Pressures on page 12	70 (1000)	140(2000)	210 (3000)	280 (4060)	350 (5000)
0, 2, 3, 6, 31, 33, 35, 52 or 521 ♦	300 (80)	300 (80)	300 (80)	300 (80)	300 (80)
1, 9 or 11	260 (69)	220 (58)	120 (32)	100 (26)	90 (24)
8	300 (80)	300 (80)	250 (66)	165 (44)	140 (37)

■ Higher flow rates possible at higher pilot pressures; consult your local Eaton sales engineer.

♦ Consult your local Eaton sales engineer regarding flow limits relative to the regenerative position of type 52 and 521 spools.

ELECTRICAL INFORMATION

Control (swept) volume(s), DG3V and main-stage of DG5V valves:

Center-to-end	7.28 cm ³ (0.44 in ³)
End-to-end	14.56 cm ³ (0.88 in ³)

Voltage ratings, DG5V valves

See 14 in "Model Code" on page 4

Voltage limits, DG5V valves:

Maximum voltage	See "Temperature limits", on page 8
Minimum voltage	90% of rated voltage

Power consumption, DG5V valves with AC solenoids:

	Initial VA rms	Holding VA rms
Dual-frequency coils at 50 Hz, types "B" and "D"	265	49
Dual-frequency coils at 60 Hz, types "B" and "D"	260	48

Power consumption, DG5V valves with DC solenoids

30W at rated voltage and 20 C (68 F)

Relative duty factor, DG5V valves

Continuous; ED = 100%

Type of protection, DG5V valves:

ISO 4400 coils with plug fitted correctly	IEC 144 class IP65
Junction box	IEC 144 class IP65 (NEMA 4)
Coil winding	Class H
Lead wires (coil types "F****")	Class H
Coil encapsulation	Class F

Note : For information on pilot valves please refer segment B, C, D of the catalog.

Operating Data

Pressure drop characteristics

See page 9, 10

Response times, DG5V valves:

Typical values for a DG5V-7-2C-E spring centered, externally piloted valve under standard test conditions and operating with 150 L/min (40 USgpm) at 350 bar (5000 psi).

Coil rating:	Pilot pressure, bar (psi):	Energizing	Time, ms ♦ De-energizing
110V 50 Hz	15 (218)	75	40
	50 (730)	50	40

	210 (3000)	40	40
	250 (3600)	40	40
24V DC	15 (218)	90	45 ▲
	50 (730)	65	45 ▲
	150 (2180)	55	45 ▲
	210 (3000)	55	45 ▲
	250 (3600)	55	45 ▲

♦ From applying a signal at the solenoid until the main-stage spool completes its travel.

▲ In pure switched circuit conditions, devoid of the effects of any suppression diodes and full-wave rectifiers.

TEMPERATURE LIMITS:

Fluid temperature limits See appendix

Ambient temperature limits: See appendix

Minimum ambient, all valves -20°C (-4°F)

Maximum ambients, DG5V valves with coils listed in 12 in "Model Code" two pages back, and under conditions stated below:

Dual-frequency coils:

at 50 Hz and 107% of rated voltage 65°C (150°F)

at 50 Hz and 110% of rated voltage 65°C (150°F)

at 60 Hz and 107% of rated voltage 65°C (150°F)

at 60 Hz and 110% of rated voltage 65°C (150°F)

Single-frequency (50 Hz) coils at 50 Hz and 110% of rated voltage 65°C (150°F)

DC coils at 110% of rated voltage 70°C (158°F)

INSTALLATION DIMENSIONS:

Valves See page 11, 12, 13

Pressure Drop Characteristics

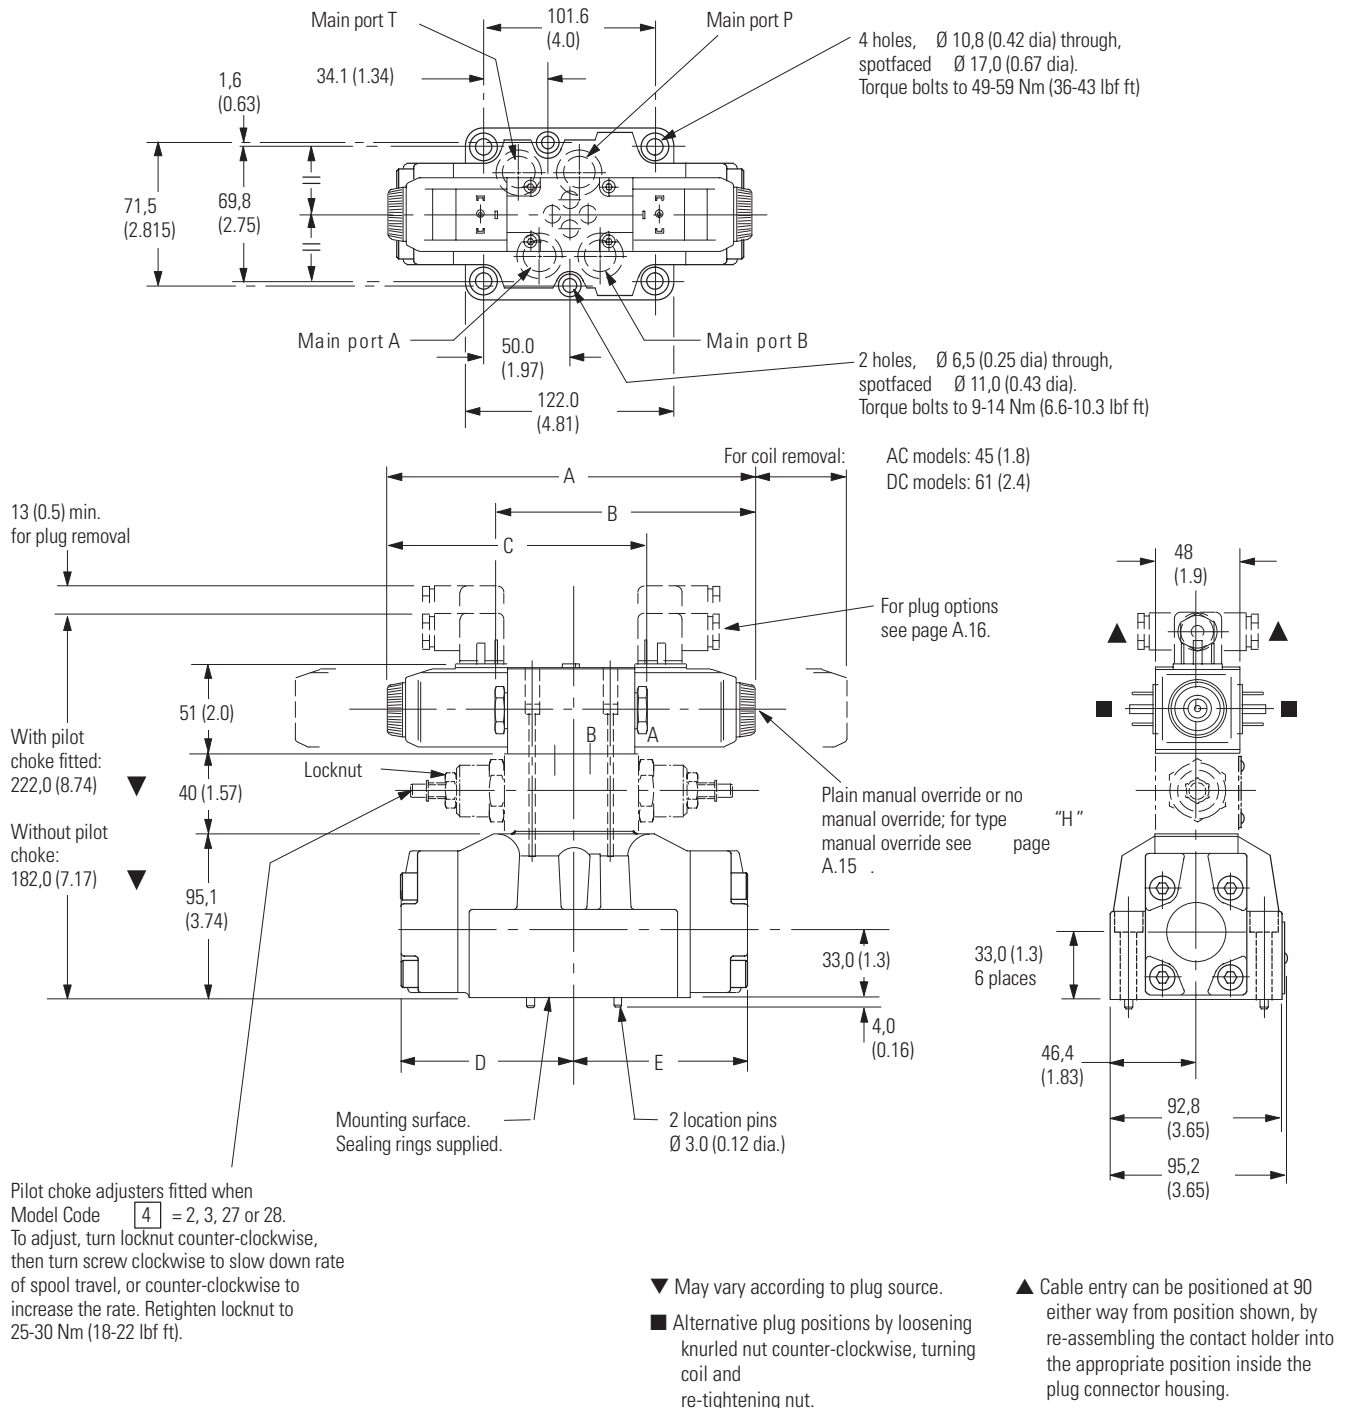

The following typical pressure drops (Δp) at flow rates (Q) are based on standard test conditions, using oil of 0.865 specific gravity. Except where otherwise stated, for any other flow rate ($Q1$) the pressure drop ($\Delta p1$) will be approximately $\Delta p1 = \Delta p (Q1/Q)^2$.
